[Wheel Selection - an overview | ScienceDirect Topics](#)
The roulette wheel selection method is used for selecting all the individuals for the next generation. It is a popular selection method used in a genetic algorithm. A roulette wheel is constructed from the relative fitness (ratio of individual fitness and total fitness) of each individual.

The gambler's fallacy is the mistaken belief that past events can influence future events that are entirely independent of them in reality. For example, the gambler's fallacy might cause someone to believe that if a coin just landed on heads twice in a row, then it's due to land on tails on the next toss.
