The gambler's fallacy is the mistaken belief th

at past events can influence future events that are entirely independent of them

in reality. For example, the gambler's fallacy might cause some

one to believe that if a coin just landed on heads twice in a row, then it's

due to land on tails on the next toss < /span > < /div > < /div >

< /div > < /div > < /div > < /div > < /div > < /div > < /div > < /div > < /div >

These biases ar

e also known as fallacies. A good example of the gambler's fallacy occurs wh

en < span > a coin has flipped that lands on heads repeatedly < /span >. A

fter three times the coin lands on heads, one might be sure that it is due to la

nd on tails. In reality, the chance of the coin landing on heads or tails is sti

ll 50 percent. < /div > < /div > < /div > < /div > < /div > < /div > < /div >
